EXPERIENCE

Marksales Software

Fast-growing Sydney-based SaaS company developing an all-in-one CRM and marketing automation platform, enabling businesses to manage leads, sales pipelines and customer engagement within a scalable cloud-based system. *Sydney NSW, Australia*

DevOps Intern Jan 2026 – Feb 2026

- Monitored cloud environments using AWS CloudWatch for observability, identifying and resolving system issues.
- Developed **Python scripts** to automate operational workflows such as installing dependencies and backing up databases, reducing manual effort and applying DevOps practices to support cloud system operations.

IBT Sydney

Fast-growing Sydney-based tutoring start-up specialising in International Baccalaureate (IB) academic support. The company has helped over 3,100 students achieve stronger academic results through personalised tutoring. *Sydney NSW, Australia*

Operations & Systems Engineer May 2025 – Jan 2026

- Redesigned the tutor onboarding system using Squarespace and Airtable to cut onboarding time by 45% (from 14 days to ~7–8).
- Analysed performance data and operational metrics on Airtable to identify issues and track improvements, and **coached 17 tutors** by coordinating student sessions, improving performance and student conversion rates.

King Saud University, Websites: cyber to cyber, DQAC

King Saud University is one of the leading universities in the Middle East, with internationally recognised research programs in cybersecurity and digital innovation. My work was conducted under the supervision of Professor Mohammad Khurram Khan, a globally recognised cybersecurity researcher. *Riyadh, KSA*

Software Development and Quality Assurance Intern for Cyber to Cyber Jan 2024 – Feb 2024

- Delivered system-level improvement proposals (13+ features), including profile management, job bidding, portfolio showcases, analytics dashboards, and collaboration workflows to improve system scalability and user growth.
- Led QA and defect reporting, documenting **30+ issues** across authentication, verification, job posting, payments, and data validation.

Software Development & Quality Assurance Intern for DQAC (Patent-Contributing Project) Feb 2025 – Feb 2025

- Improved system reliability by identifying and resolving 9+ defects across certification workflows and user data.

PROJECTS

AWS Image Captioning Web App (Image Upload Platform with AI-Generated Captions) Apr 2025 – Jun 2025

- Built **cloud-based** integration workflows using AWS services (S3, Lambda, EC2) to automate data processing within a distributed architecture.
- Built event-driven serverless workflows, where S3 upload events triggered Lambda functions for image thumbnail generation and AI-based captioning using the Google Gemini API.
- Developed a **Flask backend** within a microservices architecture, using **load balancing, NAT Gateway** for secure outbound access, and **IAM-based access control** to support scalable and secure cloud environments.

OldPhoneDeals – Full-Stack Software Engineering E-commerce App (Team Project) Aug 2024 – Oct 2024

- Developed a **full-stack web application** using **React, TypeScript, Express,** and **MongoDB**, supporting authentication, product listings, and transaction workflows.
- Implemented 20+ RESTful API endpoints and backend logic for scalable data handling, user management, and order processing using MongoDB and SQL-based querying.
- Improved code quality in a team environment by using **GitHub workflows** (branching, pull requests) and automating pre-commit linting for frontend and backend code.

Highly cited Researcher Prediction Modelling (Capstone Project) Aug 2024 – Oct 2024

- Trained machine learning models using **scikit-learn** to predict entry into **the Stanford Top 2% Scientists** list based on historical data with Python (pandas).
- Built **regression-based prediction models** (linear, quadratic, random forest trials) and conducted **7-fold cross-validation**, evaluating performance using RMSE to select the best one.

Agile Java Application with CI/CD Pipeline (Team Project) Sep 2022 – Oct 2022

- Built a Java-based application in a **Scrum team across 3 sprints**, contributing to backend features such as authentication, transactions, and persistent data handling.
- Implemented **CI/CD pipelines** using Jenkins integrated with GitHub, automating build, test, and code coverage checks for each pull request.
- Delivered iterative releases using Agile practices and Git-based workflows (branching, pull requests, code reviews) to maintain code quality.

EDUCATION

The University of Sydney *Sydney, NSW*

Bachelor of Advanced Computing, Major in Software Development 2025

Distinctions in Software Construction & Design II, Object-Oriented Programming, and Mathematical Modelling

Relevant Coursework: *Data Structures & Algorithms, Artificial Intelligence, Systems Programming, Cloud Computing, Web Application Development, Software Engineering*
